Falomo Bernarduzzi L., Albanesi G. (curatori) (2006). **Progetto Einstein. Percorsi didattici tra scienza e arte e mostra degli elaborati. Pavia, Palazzo S. Tommaso, 20 - 27 maggio 2006**. In occasione della Mostra "Einstein ingegnere dell'universo" tenutasi a Pavia presso il Museo della Tecnica Elettrica, (ottobre 2005-febbraio 2006) il Gruppo di Storia della Scienza del Dipartimento di Fisica "A. Volta" dell'Università di Pavia e la Direzione del I Circolo Didattico di Pavia hanno concordato una serie di iniziative finalizzate alla fruizione della mostra da parte di insegnanti e allievi delle scuole dell'obbligo della città. Questa collaborazione, che ha preso il nome di 'Progetto Einstein', comprendeva iniziative, realizzate in classe, legate alla preparazione della visita alla mostra e laboratori che prevedevano percorsi di carattere interdisciplinare tra Scienza e Arte. Il I Circolo di Pavia si è proposto come polo di riferimento a tutte le Scuole dell'Infanzia, Primarie e Secondarie di primo grado, pubbliche e private attive a Pavia e nel territorio pavese, che hanno aderito all'iniziativa. Frutto di questa collaborazione, la Mostra "Progetto Einstein", allestita nei locali dell'ex Chiesa di S. Tommaso dal 20 al 27 maggio 2006, ha presentato elaborati,

---

programmazioni e progetti didattici sviluppati a partire dalla visita alla mostra di Einstein e articolati su due percorsi: A. Percorso di didattica della scienza, con particolare riferimento alla fisica classica e alle profonde innovazioni intervenute con i lavori di Albert Einstein; B Percorso di educazione all'immagine, con specifico riferimento alle categorie di Spazio, Tempo e Movimento, desunte dalla fisica e opportunamente confrontate con le soluzioni figurative del mondo dell'arte ("Come rappresentarli?") La mostra era inserita nell'iniziativa "La Primavera della Scienza", patrocinata dal MIUR e coordinata dal Museo della Scienza e della Tecnologia "Leonardo da Vinci" di Milano in collaborazione con La città della Scienza di Napoli, l'Istituto e Museo di Storia della Scienza di Firenze, il Museo Tridentino di Scienze Naturali, Science Centre Immaginario Scientifico di Trieste. .

Mostra curata da Paolo Mazzarello**. La mostra, realizzata per celebrare il centenario dell'assegnazione del premio Nobel a c. Golgi, presenta temi che si svilupparono a partire dalle ricerche di Golgi negli anni di attività a Pavia presso l'Istituto di Patologia Generale dell'Università: le origini delle neuroscienze, la biologia strutturale della cellula, le ricerche sulla malaria e le prime fasi di sviluppo dell'infettivologia. Le scoperte dello scienziato in questi campi rappresentano dei capisaldi delle scienze mediche, tanto che ancora oggi portano il suo nome: l'apparato di Golgi, componente fondamentale della cellula; il ciclo di Golgi, che descrive lo sviluppo nel sangue del microrganismo che provoca la malaria; la reazione nera – o metodo di Golgi – tecnica istologica ideata dallo scienziato che permise di osservare la fine struttura del sistema nervoso centrale, presupposto indispensabile per i successivi sviluppi delle neuroscienze. .

FREGONESE LUCIO, KUVEILLER MARCO (2006). **An electric life - Intervista immaginaria con Alessandro Volta**. L'autore ha scritto la sceneggiatura delle parti del film di contenuto scientifico, tenendo in vista gli studi più avanzati su Alessandro Volta e sfruttando anche in larga misura i risultati originali delle proprie ricerche. Il film si propone di divulgare a livello elevato il percorso intellettuale che condusse Volta alle sue importanti invenzioni e scoperte. Volta operò ad ampio campo, dando contributi importanti alla chimica, all'elettricità, all'elettrofisiologia, al calore e inventando alla fine la pila, che rappresentò un vero punto di svolta nella scienza, dato che essa ebbero origine l'elettrochimica e l'elettromagnetismo. Tutti questi aspetti sono opportunamente contestualizzati nella scienza del periodo, ma non si trascurano d'altro canto i risvolti sociali e gli aspetti umani..

sensoriali realizzate dall'autore attraverso la ripetizione di esperimenti storici con una macchina elettrostatica costruita sul modello di quelle settecentesche che permette di “sentire” una leggera scossa; e con una serie di strumenti in cui il suono è protagonista nella spiegazione di differenti concetti fisici, quali il “martello filosofico”, la “sirena di Cagnard de la Tour” (dagli infrasuoni agli ultrasuoni), il microfono a carbone..

RIMOLDI ADELE (2006). **The ATLAS Simulation : an LHC Challenge.** The simulation program for the ATLAS experiment at CERN is currently in a full operational mode and integrated into the ATLAS common analysis framework, Athena. The OO approach, based on GEANT4, and in use during the DC2 data challenge has been interfaced within Athena and to GEANT4 using the LCG dictionaries and Python scripting. The robustness of the application was proved during the DC2 data challenge. The Python interface has added the flexibility, modularity and interactivity that the simulation tool requires in order to be able to provide a common implementation of different full ATLAS simulation setups, test beams and cosmic ray applications. Generation, simulation and digitization steps were exercised for performance and robustness tests. The comparison with real data has been possible in the context of the ATLAS Combined Test Beam (2004) and ongoing cosmic ray studies. .

FREGONESE LUCIO (2006). **The Legacy of Volta: From the Battery to Photovoltaic Electricity (History of Science Exhibition, Tongji University, Shanghai, China, Sept. 16-30, 2006)**. Using about 30 original 18th- and 19th-century original instruments (belonging to the Museo per la Storia dell'Università di Pavia), the exhibition illustrates Volta's invention of the battery and the consequent birth of electrochemistry and electromagnetism. The central steps of the development of electromagnetism are also presented. Special attention is then focused on Volta's idea of contact electricity and on the modern version of contact electricity (Volta effect), as well as on the incorporation of this effect in fundamental components of present-day technology (LEDs, microchips, photovoltaic detectors, photovoltaic panels)..
