Seth Lloyd, Vittorio Giovannetti, Lorenzo Maccone (2012). **Method for ensuring privacy while querying a database by using quantum superposition and multiple responses.**

1. A method for querying a database implemented with a quantum random access memory, the method ensuring complete data privacy and allowing a user to determine whether the database provider has been trying to obtain information about a query and comprising: (a) preparing by the user a first register containing a desired query and a second register containing the quantum superposition of the desired query with another query; (b) selecting at random one of the first and second registers and presenting the selected register to the database provider; (c) receiving a first response to the register selected in step (b) and sending the register not selected in step (b) to the database provider; (d) receiving a second response to the register sent in step (c); (e) measuring the response to the register containing the desired query to obtain an answer to the query; and (f) measuring the response to the register containing the superposition to determine whether the database provider has been trying to obtain information about the desired query. US 8126830 b2.

Rotondi, et al., (2012). **Technical Design Report for the: PANDA Micro Vertex Detector..** This document illustrates the technical layout and the expected performance of the Micro Vertex Detector (MVD) of the PANDA experiment. The MVD will detect charged particles as close as possible to the interaction zone. Design criteria and the optimisation process as well as the technical solutions chosen are discussed and the results of this process are subjected to extensive Monte Carlo physics studies. The route towards realisation of the detector is outlined. .

M. Bonesini, R. Bertoni, A. de Bari, G. Cecchet (2012). **The Refurbishing of MICE TOF0 and TOF1 detectors.** The TOF0 and TOF1 detectors have been refurbished in late 2010 and beginning 2011. About 50 of the older H6533MOD PMT assemblies (with R4998 PMTs), dismantled from the two detectors, have been sent to Hamamatsu, Japan, for refurbishing. TOF1 have been completely re- built at INFN Milano Bicocca, with improvements to the detector's mechanics. Before mounting, R4998 PMTs have been subject to extensive tests to assess their reliability..
