

Maria Cristina Mozzati received from the University of Pavia the Laurea degree in Physics in 1996 and the PhD degree in Physics in 2000. Her doctorate dissertation concerned magnetic and transport properties of spinel-type Li-Mn mixed oxides. From 2000 to 2003 she was a postdoctoral research fellow at the Dipartimento di Fisica "A. Volta" of the University of Pavia. From 2003 to 2006 she was project-researcher in the frame of the Italian project "Lithium Niobate-based photonic microdevices". Since 2006 she is engineer at the Dipartimento di Fisica and she is head of the Electron Paramagnetic Resonance (EPR) laboratory. Her research interests have included: study of local configuration of paramagnetic centres, magnetic interactions in solids, structural and electronic defects in oxides, structural, magnetic and transport properties of advanced materials for spintronics, photonics and electrochemistry. Her main experimental skills are in EPR and in magnetization measurements with Squid magnetometer.

She is co-author of more than one hundred scientific publications in international journals and of more than one hundred contributions to national and international conferences.

In December 2013 she obtained the National Scientific Qualification as Associate Professor for the Academic Field 02/B1 - Experimental Physics of Matter.
